01. Upgrading durability

02. HIS integration

03. Terminal expansion

04. Excellent industrial design

05. Lightweight software

06. Plenty of useful functions

YHE-916C

Cost-effective nurse call system

01. No delay in call and answer

02. Independent architecture

03. Automatic self-diagnostics

04. Call priority setting

05. Ingenious workmanship

06. Highly cost effective

NURSE CALL SYSTEM

Bridge the hearts between doctors, nurses and patients

System Introduction

Through integrated platform design, it fully meets the demands for rapid access and expansion of multiple scenarios and businesses in hospitals. It assists hospitals in building their own information-based platform systems, connects patients with medical staff through intelligent service terminals, free up some medical resources with the device's online service capability, collects data for unified analysis and display, aids in hospital management decisions, provides a standard data foundation for the construction of digital hospitals, and empowers hospital management with digital capabilities.

O Built-in failure detection, The system ensures safety and stability, automatically monitoring components and alerting staff to any issues.

O Fast processing time, Variety of terminals cover different scenarios, allowing staff to respond quickly to patient needs

1 Standard data interface, Integrating with HIS, breaking down information barriers, and enabling data sharing.

2 Intelligent Data Flow, Automatically data record, generation, and transfer, reducing manual processes and staff workload in ward management.

Open communication protocol, Standardized cabling and protocol for easy maintenance and third-party integration.

O Redefine the interaction logic, Flexible configuration, including group calls, CODE Center, call hosting, staff scheduling, and mobile receiver.
